ACIT 4850 – Enterprise System Integration – Winter 2026

Lesson 7 – Static Code Analysis

For Lesson 7 you will be setting up a CI Pipeline for a simple Java application that has a stage for static code analysis. We used pylint for this in our Python pipeline from Lab 6. We'll be using a tool called SonarQube for this in our Java pipeline in Lab 7.

Please read the following for Lesson 7:

- Static Code Analysis - Definition:
  - https://searchwindevelopment.techtarget.com/definition/static-analysis
- SonarQube - Concepts:
  - https://docs.sonarsource.com/sonarqube-server/10.1/user-guide/concepts
  - https://docs.sonarsource.com/sonarqube-server/10.1/user-guide/clean-as-you-code
  - https://docs.sonarsource.com/sonarqube-server/quality-standards-administration/managing-quality-gates/introduction-to-quality-gates
- SonarQube Architecture and Integration:
  - https://scm.thm.de/sonar/documentation/architecture/architecture-integration/
